Description and application

The digital DIAS pyrometers DT 56G are specially designed for industrial purposes. They are suitable for temperature measurement between 100 °C and 2500 °C in the glass industry, for example on glass surfaces, float glass and liquid glass.

The solid and compact stainless steel housing allows usage even under rough ambient conditions. The PYROSPOT DT 56G realizes measurement field sizes from 0.7 mm. With a minimum response time of only 10 ms (t90) the devices are also suitable for fast measuring tasks.

The standard 0/4 to 20 mA temperature linear output signal allows an easy implementation in existing measurement and control systems.

Use the integrated double laser for a correct alignment of the pyrometer to the measurement object. The double laser simplifies substantially the adjustment under difficult local conditions where the pyrometer is difficult to reach or the measurement object cannot be viewed directly.

The DT 56G possesses a galvanically isolated RS-485 interface. So the devices are bus-compatible and use the Modbus RTU protocol.

You can connect the pyrometer via an optional available interface adapter RS-485 to USB with a computer. Via display and keys but also by using the comfortable parameterization and evaluation software PYROSOFT Spot all parameters can be adjusted to the application.

Typical application areas:

- Glass and ceramic industry
- Kiln engineering
- Paper and packaging industry
- Food industry
