Description and applications

The digital pyrometers PYROSPOT DY 10L/DY 10LV are specially designed for industry and research applications. The devices are suitable for precise temperature measurement between 0 °C and 1000 °C on different non-metallic and coated metallic surfaces.

The solid construction in form of a compact housing allows usage even under rough environmental conditions. With a short response time of only 30 ms (t95) these pyrometers are also suitable for fast measuring processes. The vario optics realize measuring field diameters from 1.3 mm.

The integrated LED or laser aiming light or the alternative through-lens sighting enables to focus the measuring object exactly.

Use the optional integrated color video modul (DY 10LV) to monitor the aiming of the pyrometer at the measurement object.

The parameters of the pyrometer are adjustable via push-buttons and display directly on the device or by using the convenient parameterizing and evaluation software PYROSOFT Spot.

The temperature linear standard output signal of 0/4 to 20 mA allows easy implementation in existing measurement and control systems. The device is equipped with a galvanically isolated RS-485 interface which allows parameterizing and software evaluation even in bus systems.

Typical pyrometer application areas:

- Ceramic and glass industry
- Furnace construction
- Paper and packaging industry
- Food industry
